Nexford University **AI Disclosure Form** | MODULE ASSESSMENTS

Learner Name KAYODE OGUNYEMI

1. **Did you use any AI tool(s) to assist with this assignment?**

   ○ **No.** Why not?

   ◉ **Yes.** List the AI tool(s) you used and briefly describe the purpose for which you used the tool(s). *(e.g., brainstorming, research, drafting content)*

   ChatGPT (OpenAI) was used to support brainstorming, research guidance, drafting and refining report sections, explaining machine learning concepts, developing and reviewing Python code, interpreting model evaluation metrics, and preparing visualisation and workflow documentation. The tool also assisted with identifying potential data leakage risks, comparing ANN and logistic regression evaluation approaches, and improving the clarity of the project's findings and recommendations.

2. **To demonstrate effective AI use, please provide your initial prompt(s) and a brief description of the steps you took to refine and iterate on the AI's output for this**

   "Continue my Otomoto ANN optimization assignment."
   "Use the Cell2Cell telecommunications customer churn dataset for the final project. Help me prepare the data, develop an artificial neural network, and evaluate its performance."
   "Help me recreate and evaluate the baseline ANN, preserving the agreed architecture and using actual experimental results rather than assumed or invented metrics."
   "Develop Python scripts to evaluate the ANN and compare its performance with a logistic regression benchmark using appropriate classification metrics."
   "Help me interpret the model evaluation results, improve churn detection through validation-

3. **List at least one source you consulted to verify the AI-generated content in your work.**

   1. Kaufman, S., Rosset, S., Perlich, C., & Stitelman, O. (2012). Leakage in data mining: Formulation, detection, and avoidance. ACM Transactions on Knowledge Discovery from Data, 6(4), Article 15. https://doi.org/10.1145/2382577.2382579

   Purpose: Consulted to support the discussion of data leakage and the importance of preve
